Using #top or #bottom

The following examples use #top and #bottom with the `<a>` tag and `href` attribute to the link to that section of the page. This method is similar to using "id," but you don't have to pick a specific element. Click "Top" or "Bottom" in the Results section to see what happens.

Using the id selector

In CSS, "id" is a selector that is used to designate an area that a link should point to, similar to [anchor](#) in HTML. The nice thing about using id is you can create a link to any [element](#) on the page, rather than only the top or bottom. In the following sections, we show you how to apply id to an [HTML tag](#), and then how to link it. The following two examples link to the opening paragraph at the top of this page.

Complete HTML page code example

The following code shows how both the #top and #bottom anchors and the id selector can all be used on the same
